

Steps for Configuring Sula email ID in iPhone

Go to <https://webmail.sulawines.com/> and click on **(forget password)** to generate new password. It will ask for your name and mobile number, please provide the details as per official records only **(Important)** as verification code will come on your mobile.

1. Navigate to **settings** → **Mail** → **Accounts**, click on add account

2. Click on other, it will ask you name, email, password & description update details and click next.

3. Select **POP from New Account** windows and update below details.

The screenshot shows a configuration window for an email account. At the top, there are two tabs: 'IMAP' and 'POP', with 'POP' selected and highlighted in blue. Below the tabs, there are three input fields: 'Name' with the value 'Rupesh Pawar', 'Email' with the value 'rupesh.pawar@sulawines.c...', and 'Description' with the value 'rupesh.pawar@sulawines.c...'. Below these fields, there are two sections for mail servers. The first section is titled 'INCOMING MAIL SERVER' and contains three fields: 'Host Name' with 'zmail.sulawines.com', 'Username' with 'rupesh.pawar', and 'Password' with seven dots. The second section is titled 'OUTGOING MAIL SERVER' and also contains three fields: 'Host Name' with 'zmail.sulawines.com', 'Username' with 'rupesh.pawar', and 'Password' with seven dots.
